

PRESCRIPTION SAFETY EYEWEAR, WHY PREFER IT TO OTG* ?

When considering safety eyewear, employees with vision problems are faced with a challenge: Using prescription safety eyewear or over the glasses on top of their equipment. Here are a few reasons why we believe prescription safety eyewear are a better fit for you.

Wearing both OTGs* and your personal equipment **increases the risk of fogging**, resulting in poor visibility.

EN166 prescription safety eyewear are **more resistant** than personal equipments

OTGs* **don't fit** over all type of glasses.

The average lifetime of a prescription equipment is 2 years. It's **20 times the average lifetime** of an OTG*, meaning 20 times less material and energy consumption.

AS A RESULT, PRESCRIPTION EQUIPMENTS PROVIDE YOU WITH BETTER PROTECTION, ENHANCED VISION, OPTIMAL FIT, ALL OF WHICH FOR A LOWER COST IN USE AND INCREASED SUSTAINABILITY.
