Morakniv Introduces Garberg Black Carbon

It is the next generation of our first full tang model, the Garberg Black Carbon. We now announce a robust knife designed to meet the long-time wishes of our most dedicated customers that will serve as the ultimate One Tool Option for knife users around the world.

“We wanted to achieve our vision of the ideal full tang knife. When we launched the stainless steel Garberg in 2016, we saw an immediate positive response from customers worldwide. Now we’re taking the Garberg to the next level and satisfying the demand for a carbon steel version that complements Morakniv’s stellar outdoor line in the perfect way”, says Arvid Larsson, Research and Development Manager at Morakniv.

About Morakniv Garberg Black Carbon

The 3.2mm thick and 4.3” (109mm) long blade is made of high-quality carbon steel that is crafted in Mora and treated according to Morakniv’s SGM® (Steel Grade Mora) standard. The blade has a thin DLC scratch-resistant coating, which helps protect the carbon steel from corrosion and gives the knife an attractive black finish. The scandi grind is easy to sharpen, and the spine is ground to create a perfect 90° edge for use with a fire starter.

The Garberg Black Carbon’s handle is made from a custom, extra rugged polyamide that is extremely stress resistant and nearly unbreakable. The symmetrical shape allows for flexible handling with a two-way fit in the sheath, while the drop design on the back is sized to keep the knife steady in the hand. The handle’s traditional rhombus pattern represents its deep ties to the Mora region and provides a significantly improved grip. There is also a hole in the rear part of the handle for fastening a lanyard or rope, if preferred.

In this exclusive version, the knife is offered with a premium black leather sheath or a

rugged polymer sheath with a Multi-Mount Kit. The leather sheath is made from 3mm thick high quality black leather that offers a sleek appearance and heavy-duty support for the blade. A sturdy belt loop at the back is made from the same high-quality leather as the rest of the sheath. The polymer sheath is strongly inspired by models first created in the early 1900s, with heart-shaped cavities, a symmetrical appearance and a classic triangle-shaped tip. A built-in click lock between the sheath and handle ensures the knife stays in place, and the Multi-Mount Kit allows users to quickly and easily fasten the knife virtually anywhere.
