

AVAILABLE FROM 1st QUARTER 2025

Lightweight and durable ice axe for glacier travel and mountaineering. It features an ergonomic stainless steel head and a straight light alloy handle both with a differentiated finish.

Main features:

- head design characterized by a specific placement for the hand and reduced thickness of the central section to enable an optimal grip both when climbing up and down;
- lightweight serrated blade designed for excellent penetration into hard snow;
- strong adze designed for efficient cutting of steps;
- end part of the handle has a rougher finish for a better grip during use;
- pictogram on the handle indicating the correct connection point for use as an anchor/ deadman;
- stainless steel spike with a hole for a carabiner or a sling;
- assembled with the new bonded technology to improve the weight and increase the waterproofness;
- stainless steel and anodized light alloy construction for excellent protection against oxidation;
- available in the following lengths: 50 – 60 – 70 cm, with or without the classic DRAG-TOUR dragonne.
