

AVAILABLE FROM 1st QUARTER 2025

Multi-purpose technical ice axe for couloirs, classics slopes, north faces and ridges with mixed climbing. It features an ergonomic stainless steel head and a light alloy curved handle both with differentiated finish.

Main features:

- head design characterized by a specific placement for the hand and reduced thickness of the central section to enable an optimal grip both when climbing up and down;
- robust and lightweight serrated blade designed for excellent penetration in hard snow and ice;
- strong adze designed for efficient cutting of steps;
- curved handle at the top to facilitate use during progression and straight at the base for an effective penetration into the snow;
- end part of the handle has a rougher finish for a better grip during use;
- pictogram on the handle indicating the correct connection point for use as an anchor/ deadman;
- equipped with an adjustable hand support (mod. Handy) to increase the grip of the ice axe on technical moves;
- stainless steel spike equipped with a hole for a carabiner or a sling;
- assembled with the new bonded technology to improve the weight and increase the waterproofness;
- stainless steel and anodized light alloy construction for excellent protection against oxidation;
- available in the following lengths: 50 – 60 – 70 cm.
